Barebones shmup, no frills, easy thrills. Very similar to Bit Blaster. Awfully janky controls, on keyboard or via controller, unfortunately. \$3 may be too much if you're familiar with this genre; plenty of deeper shmups out there for better value. If this is one of your first, however, or if you want to hand the controls off to other people at a house party, yeah, this'll do nicely.. Roguelike arena shooter whose only upgrades are the 4 ships you can unlock with the currency you are gathering during gameplay. The good point is that it plays smoothly but without mouse support; this is not a twinstick shooter. Other upgrades come in randomly as you kill baddies and roids and difficulty ramps up as you go. One of many bosses will come once you reach a certain mark. well made i'd say. Ony one of the ships you unlock has an ability that helps you survive in the long run. There are WAY better flash games out there with proper roguelike upgrading systems which makes this game obsolete and not worth the buy. This is still a good effort on the developer's part but it really, really lack some good features found in most games of this genre.. Barebones shmup, no frills, easy thrills.
